Kevin,

To follow up on my request earlier today, I am unsure of how much information would be provided via the FOIA request, but we would be looking for a great deal of technical information. It is likely that Tetra Tech would be taking a detailed technical review of the work and would possibly be doing breakdowns of the impacts that are being predicted. It would be preferable for us to be able to duplicate your results and then take a look at the cause of those results. In order for us to do that we would want to make sure we had the same inputs and processing tools you applied to generate the results you have. Would you be able to supply me with the electronic files comprising all of the inputs, executable files, program code, and output files that were used in the pre-processing, modeling and post-processing that you conducted to generate the results that will be available when the draft report and electronic files are made available?

In addition, would I be able to get a copy of the FOIA request you are responding to?

Thanks

Robert J. Hammer
